Submitted (13-MXY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:22857158

The sequence in this assembly is a combination of BAC based reads and whole genome shocgun sequencing reads assembled using Atlas and whole genome shocgun sequencing reads assembled using Atlas and whole genome shocgun sequencing reads assembled using Atlas assembly (a 'contig-seaffold'). Within each contig described in the feature table below represents a soaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig-saaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Na to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shocgun sequence reads Soth end sequences and whole genome shocgun sequence reads Soth end sequence and whole genome shocgun sequence reads Soth end sequence and whole genome shocgun sequence reads. Both end sequences and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence reads. Both end sequence and whole genome shocgun sequence and whole genome shocgun sequence and solutions.
* NOTE: Estimated insert size may differ from sequence length (see (Seebank Graft data.html).

* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Assembly program: Atlas 3.0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB 2; Length 274998;

L. Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Maylor Plaza, Houston, TX 77030, USA.

On May 13, 2003 this sequence version replaced gi:23321404.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bem.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) NOTE: This sequence may represent more than one clone. NOTE: This sequence in the sequence in the consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13531: contig of 13531 bp in length

US-10-041-856-1/C
Sequence 1, Application US/10041856
Publication No. US2002016929941
GENERAL INFORMATION:
APPLICANT: SLAUGENHAUPT, SURAN
TITLE OF INVENTION: GENE FOR IDENTIFYING INDIVIDUALS WITH FAMILIAL.
TITLE OF INVENTION: DYSAUTONOMIA
FILE REFERENCE: 1829-4004081
CURRENT APPLICATION NUMBER: US/10/041,856
CURRENT APPLICATION NUMBER: US/02-07-08
PRICE FILING DATE: 2002-07-08
PRICE FILING DATE: 2001-01-06
NUMBER OF SEQ ID NOS: 88
CONTRACT PRICE PARENTE NOS: 88

GENERAL INFORMATION:
APPLICANT: Anderson, Sylvia
APPLICANT: Anderson, Sylvia
APPLICANT: Anderson, Sylvia
TITLE OF INVENTION: Percetion of Mutations in a Gene Encoding IXB Kinase-Complex-Asso;
FILE REFERENCE: Rubin 201
TITLE OF INVENTION: Protein to Diagnose Familial Dysautonomia
FILE REFERENCE: Rubin 201
CURRENT APPLICATION WHOBER: US/10/050,189A
CURRENT FILING DATE: 2002-01-16
NUMBER OF SEQ ID NOS: 13
SOFTWARE: PatentIn version 3.1
SEQ ID NO 7
LENGTH: 20

Sequence 170, Application US/10158844

Fublication No. US20040029118A1

GENERAL INFORMATION:
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences
NUMBER OF SEQUENCES: 391
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
                                                                                                                                                                                                                                   Sequence 170, Application US/08961527
